

DÉMONSTRATIONS

addition

$$a+b = b+a$$

$$(a+b)+c = a+(b+c)$$

$$a \times (b+c) = a \times b + a \times c$$

$$a+0 = a$$

$$a = b \rightarrow a + c = b + c$$

$$a = b \rightarrow a \times c = b \times c$$

multiplication

$$a \times b = b \times a$$

$$(a \times b) \times c = a \times (b \times c)$$

$$a \times 1 = a$$

A

E

soustraction

$$\begin{aligned} \forall q, \exists q' : \\ q + q' = 0 \end{aligned}$$

$$q' = -q$$

division

$$\begin{aligned} \forall d \neq 0, \exists d' : \\ d \times d' = 1 \end{aligned}$$

notations

$$d' = 1 / d$$

Cliquez sur la formule dont vous souhaitez la démonstration !

- $a \times 0 = 0$ $-(-a) = a$
- $1/(1/a) = a$ $(-1) \times a = -a$
- $(-a) \times b = - (a \times b)$ $(-a) \times (-b) = a \times b$

Pourquoi $a \times 0 = 0$?

$$a \times (1+0) = (a \times 1) + (a \times 0)$$

$$(1+0) = 1$$

$$a \times 1 = a$$

$$a = a + (a \times 0)$$

$$a + \underline{(-a)} = a + \underline{(-a)} + (a \times 0)$$

$$0 = 0 + (a \times 0)$$

$$0 = (a \times 0)$$

addition	multiplication
$a + b = b + a$	$a \times b = b \times a$
$(a+b) + c = a + (b+c)$	$(a \times b) \times c = a \times (b \times c)$
$a \times (b+c) = (a \times b) + (a \times c)$	
$a + 0 = a$	$a \times 1 = a$
$a + x = 0 \Leftrightarrow x = -a$	$a \times u = 1 \Leftrightarrow u = 1/a$
$a = b \rightarrow a + c = b + c$	$a = b \rightarrow a \times c = b \times c$

Pourquoi $-(-a) = a$?

$-(-a)$, c'est l'opposé de $(-a)$

c'est-à-dire le nombre ? tel que

$$(-a) + ? = 0$$

C'est donc a

$$-(-a) = a$$

addition	multiplication
$a + b = b + a$	$a \times b = b \times a$
$(a+b) + c = a + (b+c)$	$(a \times b) \times c = a \times (b \times c)$
$a \times (b+c) = a \times b + a \times c$	
$a + 0 = a$	$a \times 1 = a$
$a + x = 0 \Leftrightarrow x = -a$	$a \times u = 1 \Leftrightarrow u = 1/a$
$a = b \rightarrow a + c = b + c$	$a = b \rightarrow a \times c = b \times c$

Pourquoi

$$\frac{1}{\frac{1}{a}} = a ?$$

$\frac{1}{\frac{1}{a}}$ c'est l'inverse de $\frac{1}{a}$

c'est-à-dire le nombre ? tel que

$$\frac{1}{a} \times ? = 1$$

C'est donc a

$$\frac{1}{\frac{1}{a}} = a$$

addition	multiplication
$a + b = b + a$	$a \times b = b \times a$
$(a+b) + c = a + (b+c)$	$(a \times b) \times c = a \times (b \times c)$
$a \times (b+c) = (a \times b) + (a \times c)$	
$a + 0 = a$	$a \times 1 = a$
$a + x = 0 \Leftrightarrow x = -a$	$a \times u = 1 \Leftrightarrow u = \frac{1}{a}$
$a = b \rightarrow a + c = b + c$	$a = b \rightarrow a \times c = b \times c$

Pourquoi $(-1) \times a = -a$?

$$\begin{aligned} & a + [(-1) \times a] \\ &= [1 \times a] + [(-1) \times a] \end{aligned}$$

a

$$\begin{aligned} &= [1 + (-1)] \times a \\ &= 0 \times a \end{aligned}$$

On sait déjà que $0 \times a = 0$.

$$a + [(-1) \times a] = 0$$

$$[(-1) \times a] - a$$

addition	multiplication
$a + b = b + a$	$a \times b = b \times a$
$(a+b) + c = a + (b+c)$	$(a \times b) \times c = a \times (b \times c)$
$a \times (b+c) = (a \times b) + (a \times c)$	
$a + 0 = a$	$a \times 1 = a$
$a + x = 0 \Leftrightarrow x = -a$	$a \times u = 1 \Leftrightarrow u = 1/a$
$a = b \rightarrow a + c = b + c$	$a = b \rightarrow a \times c = b \times c$

Pourquoi $(- a) \times b = -(a \times b)$?

On sait déjà que $(- 1) \times a = - a$. Diapo 6.

$$\begin{aligned}[-a] \times b &= [(-1) \times a] \times b \\&= (-1) \times [a \times b]\end{aligned}$$

$(- 1) \times A = - A$. Diapo 6.

$$(- a) \times b = - [a \times b]$$

addition	multiplication
$a + b = b + a$	$a \times b = b \times a$
$(a+b) + c = a + (b+c)$	$(a \times b) \times c = a \times (b \times c)$
$a \times (b+c) = (a \times b) + (a \times c)$	
$a + 0 = a$	$a \times 1 = a$
$a + x = 0 \Leftrightarrow x = - a$	$a \times u = 1 \Leftrightarrow u = 1/a$
$a = b \rightarrow a + c = b + c$	$a = b \rightarrow a \times c = b \times c$

Pourquoi $(-a) \times (-b) = a \times b$?

D'après la diapo précédente :

$$\begin{aligned}(-a) \times (-b) &= [(-1) \times a] \times [(-1) \times b] \\&= (-1) \times a \times (-1) \times b \\&= [(-1) \times (-1)] \times [a \times b]\end{aligned}$$

On sait déjà que $(-1) \times a = -a$.

$$\begin{aligned}&= [-(-1)] \times [a \times b] \\&= [1] \times [a \times b]\end{aligned}$$

$$(-a) \times (-b) = [a \times b]$$

addition	multiplication
$a + b = b + a$	$a \times b = b \times a$
$(a+b) + c = a + (b+c)$	$(a \times b) \times c = a \times (b \times c)$
	$a \times (b+c) = (a \times b) + (a \times c)$
$a + 0 = a$	$a \times 1 = a$
$a + x = 0 \Leftrightarrow x = -a$	$a \times u = 1 \Leftrightarrow u = 1/a$
$a = b \rightarrow a + c = b + c$	$a = b \rightarrow a \times c = b \times c$
